***DNA preservative is a proprietary formula and potentially toxic so don’t inject!
To your spray bottle add 2 mL DNA mixture, 1 mL water & 1 mL of preservative (if using, otherwise add another 1 mL water).

1. Mix well.

2. Spray liberally on sheets, clothing, soft and sensitive items. Use like febreeze! You can even spray it on yourself if you don’t include the preservative. I wouldn’t drink it though.
